

# Acknowledgments

This book is based on my doctoral research completed at George Mason University in Virginia, from 2012 to 2017. I owe the most to my scientific advisor Dr. Louise Shelley, whose expertise, guidance, and innovative insights into corruption and organized crime deepened and enriched my understanding of these problems from both a theoretical and practical perspective. The book would never have been written without her encouragement and without the support of the Center for Terrorism, Transnational Crime, and Corruption Studies (TraCCC), which she founded at George Mason University. TraCCC served as a thought-provoking and intellectually stimulating home throughout the research process. One of the most valuable advantages was the intensive process of dialog with international scholars and anti-corruption practitioners whom I was lucky to meet at numerous events, conferences, and lectures organized by TraCCC. This fascinating and energizing experience strengthened my belief that international cooperation in the field of anti-corruption programs has enormous potential to create mechanisms for social control and promote action for responsible public administration.

During my research, many people and organizations were instrumental in shaping my ideas about corruption and entrepreneurship. In particular, the Mercatus Center at George Mason University was a supportive community for my research. My gratitude is extended to Dr. Peter Boettke, Dr. Jayme Lemke, and many other scholars from the Mercatus Center. I owe a special debt to all of them for helpful and extremely useful discussions and new insights into private enterprise and entrepreneurship. I am also deeply grateful to the anti-corruption experts at the Center for International Private Enterprise (CIPE) for opportunities to discuss my research on business associations and collective action against corruption. I am especially indebted to Frank Brown and Dr. Kim Bettcher who provided anti-corruption expertise that greatly assisted the research.

I would also like to include a special note of thanks to my colleagues at the World Bank. Working on the World Bank's Entrepreneurship Project was a magnificent and challenging experience for me. I convey my deep regards to Valentina Saltane who generously shared her research.

I owe more than I could say to numerous entrepreneurs whom I met during my fieldwork in Russia in 2015. They generously gave me their precious time,

filling out surveys, answering questions during long interviews, sharing their fascinating ideas about anti-corruption policies, explaining their problems and challenges, and trusting me to tell their stories. It is now a great honor for me to let their voices be heard through this book. The experiences of those Russian entrepreneurs show a growing need to document a range of best practices and anti-corruption policies capable of countering bureaucratization and government imperfections which impede social and economic development. Having grown up in Russia, it has always been hard for me to observe the devastating and distorting impact of corruption on ordinary citizens and entrepreneurs. Yet, this experience has given me a powerful impetus, strengthening my determination to devote my research efforts to the development of anti-corruption programs which could be implemented in Russia and other countries. In this respect, it was my greatest privilege to work with every Russian entrepreneur who participated in this study and whose contributions to this book have proven invaluable.

My final thanks go to my family and friends for their support and encouragement during my research. The book would never have gotten off the ground had not my father given me the courage to take the first steps in my doctoral studies. I am also grateful to my friend Sajith Kumar, who restored a significant part of my research when both the original file and a backup copy of my archival work containing 150 pages mysteriously disappeared from my laptop. Without his help, some of the valuable data collected during my fieldwork in Russia would have been irrevocably lost and it would have been extremely hard to finish this book in a timely manner.
